Metatron – Concept White Paper

A Strategic Vision for Israel’s Secure and Recognized Borders

Executive Summary

Israel requires a technologically advanced, sovereign, and secure border. The Metatron project proposes a dual solution — a fortified defensive wall and a demilitarized tunnel — combined with an international governance model for key zones. This one-sided initiative seeks to provide long-term stability without dependency on negotiation outcomes.

1. Project Objectives

- Ensure Israel's security within its 1949 internationally recognized borders

- End reliance on Palestinian internal dynamics

- Construct an impenetrable and intelligent barrier independently

- Offer a verifiable model for balance through international supervision

2. The Wall – 'Great Defensive Wall of Israel'

Length: ~1115 km

Height: 20–30 m

Thickness: 6–10 m

Foundation Depth: 50–100 m

Materials: Reinforced concrete with composite coating

Key Elements: underground protection systems, AI-controlled turrets, Iron Beam lasers, satellite and drone surveillance, cyber defense

3. The Tunnel – 'Controlled Connection'

A secure underground corridor between Gaza and the West Bank, entirely beneath Israeli territory, with demilitarized zones above.

Access is limited to Palestinian territories only, and monitored for logistics and emergency use.

4. International Jerusalem

Old City, Mount of Olives, Temple Mount, Mount Zion, and Gethsemane are proposed to become an internationally governed zone.

Managed by a neutral council (e.g., ICCJ) with Israeli, Waqf, Christian and global participation.

5. Implementation Roadmap

Phase I: Southern border (Egypt) – 10 km – 2025–2026

Phase II: Negev – 230 km – 2026–2028

Phase III: Jordan border – 340 km – 2028–2030

Phase IV: North (Syria & Lebanon) – 130 km – 2030–2032

Phase V: Remaining gaps & reinforcement – 2032–2035

6. Budget & Funding

Average cost per km: ~$68 million

Phase I cost estimate: $680 million

Funding: Israeli defense budget + potential international partners (US, EU, foundations)

7. Legal & Diplomatic Foundations

Borders: 1949 Armistice Line (Green Line)

No requirement to dismantle existing walls in Judea and Samaria

Tunnel: logistics only, under Israeli control

Jerusalem zone based on precedents: UN HQ, Vatican, DMZ Korea
